I would like for the FCC to support the broadcasting of weather and traffic reports. I travel and it is very beneficial to tune into XM and get the latest traffic report for the area no matter what the time of day and night. The NAB should have no say in what I as a paying member of XM should be permitted to hear. I the Freedom of speech is being violated by their petition 04-160. Localized radio provides this information only during the traditional rush hours. With XM radio it is available at the touch of a finger when I want or need the reports.
